SUMMARY

Automation engineer with two years of hands-on work at Applivity, where I built n8n workflows and Python scrapers that cut manual data entry by 75%, and Power BI dashboards that replaced manual reporting. I have also built RevOps projects in HubSpot and GoHighLevel covering lead scoring, routing, and CRM sync.

SKILLS

Revenue Ops and CRM: HubSpot, GoHighLevel, lead scoring and routing
Automation and AI: n8n, REST APIs and webhooks, Google Gemini, Meta WhatsApp Cloud API, AI agents, LangChain, LangGraph
Google and Data: Google Apps Script, Google Sheets and Drive APIs, Power BI
Languages and Web: Python, JavaScript, TypeScript, SQL, Next.js, FastAPI, Supabase
Tools: Playwright, Selenium, Git

EXPERIENCE

Data Operations Analyst (Automation and Data)
Applivity, Islamabad | May 2024 – Present

- Built an n8n workflow that pulls candidate details from resumes in Google Drive into Google Sheets, cutting manual entry by 75% across 5,000+ applicants.
- Added confidence scoring that flags unclear records for human review, keeping extraction accuracy above 99%.
- Wrote Playwright scripts in Node.js that register employee dependents on a benefits portal, removing manual form entry.
- Built Python and Selenium scrapers that collect and clean contact leads from LinkedIn, Upwork, and job portals.
- Replaced manual reporting with automated Power BI dashboards for hiring throughput and departmental expenses.
- Built a cloud attendance web app that replaced paper timesheets for active staff.
- Created Admin and Employee portals for leave requests and automated monthly hour calculations.

PROJECTS

Enterprise RFP and Security Questionnaire Auto-Responder (LangChain, LangGraph, FastAPI, Next.js) | Live app

- Built a RAG pipeline that drafts answers from security policy documents, cites the exact source text, and grades confidence.
- Routed answers at 0.80 confidence or higher automatically and sent low-confidence answers to a human review queue.

Apex Dental and Aesthetics: WhatsApp AI Receptionist (Gemini, Next.js, Vercel) | Live app

- Built a 24/7 AI receptionist for patient triage, appointment booking, and intake over WhatsApp and web chat.
- Added webhook deduplication so repeat Meta deliveries are not processed twice.

Autonomous Lead Qualification and Routing Engine (n8n, HubSpot API, Next.js, Python) | Live app

- Built an event-driven pipeline that enriches inbound leads and syncs contacts, companies, and deals through HubSpot.
- Designed a 0 to 100 scoring model across four factors, with automated Slack alerts for Tier-1 leads.
- Built an interactive workspace for testing scoring logic and generating CRM payloads.

Multi-Agent Performance and Cost Governance Dashboard (Streamlit, Supabase) | Live app

- Built a dashboard that tracks latency, token usage, and health across an AI agent cluster.
- Added semantic caching with pgvector, reducing repeat query costs by about 40%, plus automated spend alerts.

SmartLead Engine: Omnichannel Lead Scoring and Dispatch (GoHighLevel, n8n) | GHL snapshot

- Built a six-stage lead pipeline connecting WhatsApp, web forms, and GoHighLevel to score and route leads automatically.
- Designed multi-branch workflows with temperature-based routing, follow-ups, and appointment reminders, bringing speed-to-lead under 36 seconds across $36.1K in pipeline.

Autonomous Multi-Agent Dining Concierge and Voice AI (Next.js, Supabase, n8n, Web Speech API) | Live app

- Built a conversational AI concierge for reservations, menu questions, and dietary checks over text and real-time voice.
- Routed requests across seven sub-agents with session memory and synced bookings to Supabase and n8n.

EDUCATION

Bachelor of Software Engineering, International Islamic University, Islamabad | 2019 – 2024

CERTIFICATIONS

- Microsoft Power BI Data Analytics
- n8n Workflow Automation
- GoHighLevel (GHL) Workflow and API Architecture
- Claude 101 AI Fluency
